
Sidebar Implementation Files

Here are **ALL** the files you need for the sidebar functionality:

Core Sidebar Files

1. `client/src/components/ui/sidebar.tsx` ★
 - Main sidebar component with full implementation
 - Includes: `SidebarProvider`, `SidebarInset`, `SidebarTrigger`, `SidebarContent`, etc.
 - Has context management, responsive behavior, and keyboard shortcuts
2. `client/src/components/navigation.tsx` ★
 - Current navigation implementation using `Sheet` component
 - Contains the 12 menu items (Education, Statistics, Events, etc.)
 - Uses language translations

Required UI Components

3. `client/src/components/ui/sheet.tsx` ★
 - Used in current navigation for mobile sidebar
 - `Sheet`, `SheetContent`, `SheetTrigger` components
4. `client/src/components/ui/button.tsx` ★
 - Used for sidebar triggers and menu items
5. `client/src/components/ui/separator.tsx`
 - Visual separators in sidebar
6. `client/src/components/ui/input.tsx`
 - Search functionality in sidebar
7. `client/src/components/ui/tooltip.tsx`
 - Tooltips for collapsed sidebar state
8. `client/src/components/ui/skeleton.tsx`
 - Loading states

Responsive Behavior

9. `client/src/hooks/use-mobile.tsx` ★
 - Mobile detection hook (breakpoint: 768px)

Utilities

10. `client/src/lib/utils.ts` ★
 - Contains `cn()` function for class name merging
 - Essential for all component styling

Language Support

11.client/src/contexts/LanguageContext.tsx ★

- Translation context with menu item translations
- Contains all sidebar menu labels in Spanish/English

Styling Files

12.client/src/index.css ★

- Contains ATM custom CSS variables and theme colors
- Tailwind configuration

13.tailwind.config.ts ★

- Tailwind configuration with custom colors
- ATM brand colors: Green 1 (#1A4D2E), Green 2 (#0A8935)

Configuration Files

14.components.json ★

- shadcn/ui configuration for proper component imports

15.package.json ★

- All required dependencies (especially UI component libraries)
